

Meama CRM

Product Specification

NextGen Innovation Program · 2025–2026

OVERVIEW

What we are building

Meama operates across e-commerce, vending, B2B, and collect channels with no unified view of its customers, products, or campaigns. Retention and upsell decisions are made manually, based on experience rather than data. This platform fixes that.

MODULE	PROBLEM IT SOLVES
Customer 360	No unified behavioral profile exists per customer
Product Intelligence	No view of what sells with what, or why
Campaign Intelligence	Campaigns run manually, without prediction or measurement
Alerts	No early warning system for stock, churn, or margin risk
Command Overview	No single executive health view across all channels
Reports	Reporting is manual, ad hoc, and retrospective

MODULE 01

Customer 360

A complete behavioral and commercial profile for every customer. The goal is to know not just what a customer bought, but who they are, what they value, and what they will do next.

Identity & contact

- Customer ID, name, email, phone (default + OTP)
- Registration date, tenure, active months
- Registered vs. guest status

Purchase behavior

- RFM — Recency, Frequency, Monetary, auto-calculated
- Total orders, AOV total, AOV capsules only
- Average packs per month, last and expected next order date
- Discount dependency % — share of orders with discount applied

Flavor & product profile

- Top flavors, format preferences, favorite intensity
- Flavor subcategories, never-bought capsules flag
- Average capsule price range

Machine ownership

- Machine owned — model and acquisition date
- Recommended next machine — based on intensity profile
- Machine → capsule conversion status

Lifecycle & geography

- Status — New / Active / At-risk / Lost
- Inactive threshold — 3 months without order, at-risk at 45 days
- Churn reason and return period if applicable
- Region, delivery vs. pickup preference, capital vs. regional

Channel behavior

- Primary channel and channel usage %
- E-commerce vs. brand store split

A customer is considered inactive after 3 months without an order. At-risk status triggers at 45 days of silence and initiates a retention workflow.

MODULE 02

Product Intelligence

A full view of product performance, behavior under promotions, bundle patterns, and customer retention by SKU.

Revenue & margin

- Top product revenue — ranked by total and by channel
- Revenue growth by month per SKU
- Gross margin per product
- Average monthly capsule spend per active customer
- Average selling price — e-commerce and brand store tracked separately

Promotion behavior

- Sales velocity in promo vs. without
- Best and worst performing promotions by launch date average

Stock & operations

- Stock status and low stock threshold alerts
- Refund rate — which product has the most refunds
- Orders past average delivery time

Bundling & affinity

- Most frequently bought together pairs
- Machine accessory bundle patterns

Customer retention by product

METRIC	WINDOW
Reorder rate	30 / 40 / 60 / 90 days
Product retention rate	Lifetime
Which capsule brings customers back most	Per SKU

MODULE 03

Campaign Intelligence

A closed-loop campaign system covering owned channels (email, SMS) and paid media (Meta). Every campaign is suggested by AI, approved by a manager, measured after launch, and fed back to improve the next suggestion.

Promotion metrics

- Top promotion by revenue
- Worst performing promotion — by average launch date
- Promotion revenue total
- Customer count per campaign — reached and converted

Paid media

- ROAS per campaign and account total
- Campaign statuses — active, paused, completed
- Meta spend — daily, weekly, total
- Total ad account cost
- Audience breakdown — age, gender, interest categories from Meta
- New customers acquired and lapsed customers reactivated via ads

Tools

- Calendar — all campaigns in one view, color-coded by type
- Plan — campaign table with type, date, segment, discount, ROI, status
- Calculator — segment + SKU + discount → margin, revenue, break-even, ROI
- Approval queue — pending campaigns awaiting manager sign-off

Campaign loop

STEP	ACTION	OWNER
Suggest	ML tags trigger proposal with segment, channel, offer, predicted uplift	AI
Predict	Revenue estimate, ROI, margin impact, fatigue risk shown	AI
Approve	Manager reviews draft and copy — approves, edits, or rejects	Manager
Launch	Campaign fires to segment via email, SMS, or paid platform	AI
Measure	Actual vs. predicted results tracked per segment and channel	AI

STEP	ACTION	OWNER
Learn	Results fed back to improve next suggestion accuracy	AI

Capsule loyalists and flavor explorers must never receive discount offers. Use exclusivity and early product access instead. Maximum safe discount: 25%.

MODULE 04

Command Overview

The executive homepage. A single screen showing the health of the entire business with enough context to act without opening another report.

Customer

- New customers this period vs. last
- Active buyers — at least one order in the last 3 months
- Total registered customers, registered vs. guest split
- Customer lifetime value
- Monthly churn rate
- Machine → capsule conversion rate

Revenue & orders

- AOV — zero-order customers excluded
- AOV capsules tracked separately
- Contribution margin
- Revenue forecast — current and next month
- Business health score — composite across retention, margin, growth
- Total orders all channels, ad account cost total

Product highlights

- Top product by revenue, top product by units (MTD)
- Most returned-to product — which capsule brings customers back most
- Average capsule selling price — e-commerce and brand store separate
- Active and upcoming promotions

Channel & delivery

- Region vs. capital breakdown
- Delivery vs. pickup comparison

MODULE 05

Alerts

A proactive early warning system that surfaces critical signals before they become problems.

ALERT	TRIGGER	SEVERITY
Low stock	SKU below minimum threshold	High
At-risk customer	45+ days no order	High
Cancelled orders spike	>15% of orders cancelled in 24h	High
Margin drop	Product margin below minimum	High
Refund share	Refunds exceed 5% of orders	Medium
Overdue fulfillment	Orders past SLA delivery window	Medium
Meta ROAS drop	ROAS below 2.0× on active spend	Medium
Highest discount product	Discount depth outlier vs. category	Low
Least profitable product	Margin below category average	Low

Alerts are delivered via Telegram to the relevant manager in the chain. Critical alerts also surface on the Command dashboard in real time.

MODULE 06

Reports

Scheduled and on-demand analytical reports for pattern discovery, planning, and retrospective analysis.

Time-based analysis

- Hourly sales — peak hours by channel and product
- Day-of-week sales — volume and AOV by day
- Holiday performance — uplift on Georgian public holidays and seasonal events
- Seasonality — 12-month rolling pattern view

Bundle & affinity

- Most frequently bundled product pairs
- Product-to-product affinity by SKU
- Machine bundle patterns — accessories and capsules paired with each model

CALL:
At risk customers

BUILD PLAN

Phases & timeline

PHASE	DELIVERABLE	DURATION
1 — Foundation	Supabase schema, data migration from all sources, FastAPI backbone	1–2 weeks
2 — Customer 360	Feature engineering, HDBSCAN clustering, XGBoost sales tags, churn scoring	2-3 weeks
3 — Product Intelligence	Affinity mapping, bundle analysis, SKU tagging, retention by product	2-3 weeks
4 — Campaigns	AI suggestion engine, calculator, calendar, approval queue, Meta integration	2-3 weeks
5 — Alerts & Reports	Alert routing via Telegram, scheduled reports, time-based analysis	2-3-4 weeks

Stack

LAYER	TECHNOLOGY
Frontend	React + python
Backend	FastAPI (Python)
Database	Supabase (PostgreSQL), train/test data splitting, data vectorization for RAGS
Deployment	Vercel
Campaign AI	Claude API / * * * Skills * Agents No test cases
Orchestration	Langraph
Notifications	Mail / whatsapp / telegram / react sender
Language	English
